

YES

You want elite tonnage and quality to feed your herd, but you also want to manage your fields as efficiently as possible. There's no conflict here. Many Pioneer® brand corn hybrids come with the PHD (Proven Highly Digestible) silage designation. Some are available with the Roundup Ready¹ Corn 2 trait. All contain the proven, trusted genetics that are hallmarks of Pioneer hybrids. So you can streamline your weed management program and still produce the nutritional yields you need for your herd. Say "Yes" to hybrids that are easy to manage and good to feed. This is . . . *Technology That Yields.*[®]
