

Food, Feed, Fuel and Farmer Profitability

Today Pioneer is driving new opportunities to help farmers become more profitable by delivering high-yielding products, proven expertise and innovative services to meet growing demands from the biofuels, livestock and food production industries.

Several key Pioneer® brand hybrids have been developed for end-use markets: **High Total Fermentable (HTF)** hybrids provide more ethanol per bushel. **High Available Energy (HAE)** hybrids contain more digestible energy for pork and poultry producers. **Food-grade** corn hybrids offer food processors higher milling quality corn.

Delivering high-output products is only one piece of the equation. Pioneer also is developing new ways for farmers to profit from our products by using innovative tools. **Pioneer MarketPoint®** resource helps growers get the prices they want for high-quality grain, and **Pioneer QualiTrak™** system assists processors and growers in evaluating and understanding quality variations of incoming grain.

To learn more about these products and services and our commitment to American farmers, visit www.pioneer.com/enduse
