

Pump high-performance Pioneer® brand ethanol hybrids into every acre.

Pioneer is working hard to offer growers hybrids that produce maximum ethanol per acre. How? By teaming unique Pioneer genetics with Herculex® insect protection traits that ultimately help maximize grain yields. This exciting technology can reduce insect damage to grain and prevent molds and mycotoxins, helping assure a more consistent supply of higher quality grain and a stronger market for distillers grain.

Nearly 140 Pioneer® brand HTF ethanol hybrids are part of the Pioneer IndustrySelect® program, which is a way customers can identify Pioneer seed genetics that offer improved functionality for end-use applications and markets.

Meet the growing demand for ethanol with Pioneer and ... **TECHNOLOGY THAT FUELS.™**
