

## Jaguar harvester gets new options

CLAAS of America has introduced the PU 380 pick-up head and Cam Pilot for its Jaguar forage harvester to boost capacity and improve crop quality.

The PU 380 comes in a 12-foot 6-inch width with the standard quick coupler for easy connection and operation on the Jaguar forage harvester.

The PU 380 offers improved ground following abilities from cab-controlled orders and pivots independently from the main frame of the head. The new head comes with beefed up gears and a ratchet-style auger clutch for longer life than friction designs. The 380 also features short flighting; a redesigned auger tube; replaceable tines,

camshaft arms, wear strips on the auger and paddles; and the ability to replace the floor and intake. The 380 keeps the company's proven roller crop press and boosts the capacity of the Jaguar by 10%. The Claas Cam Pilot, which automatically steers the Jaguar along a windrow to enable the operator to concentrate on keeping the machine

running at top efficiency, is available for the 380 and other Claas pickup heads.

New remote spray control saves time, energy and chemicals.

Ever wish you could cut your work time in half? Like when you're checking spray tips and nozzles. Raven's latest innovation, an integrated remote spray control device, makes it possible — and it works with all new AccuBoom section control systems for greater savings and performance.

Unlike other remotes, the handy AccuBoom remote control system and control node are integrated for easier installation and a superior, less expensive solution. With the new AccuBoom remote, you can turn each boom section on and off from outside the cab while you're right there watching — safely. No more jumping in and out of the cab while your sprayer is spraying costly chemicals, or having to rely on a second person on the ground or in the cab to do the job.

"I really like it," said Gary Cook of Paul, Idaho, after spraying 3,000 acres with the new AccuBoom remote section control installed. "Flushing and cleaning out the booms was a snap. And in the end, it saved me time, chemicals and energy."

For optimum chemical coverage and performance, there is no substitute for the timely checking and maintenance of spray tips and nozzles. With AccuBoom's convenient hand-held remote, you won't be tempted to put it off. The headaches and hassles are gone — and pre-spray inspections and winterizing can't get any easier.
