

CoRoN[®]

Controlled-Release Nitrogen

Give Your Crop What it Needs, When it Needs it

CoRoN has proven its value on many crops across the country. And its agronomic benefits have been documented in multi-state, university tests on cotton. Those tests showed that CoRoN consistently improved yields and quality, compared with foliar applications of urea.

Bottom line: CoRoN works! And it can work on your crops in your fields.

CoRoN provides crops with weeks of controlled-release nutrients. And it can provide these nutrients at critical growth stages when crops need peak nutrition.

So if you want your crop to get that nutritional "push" to help increase yields and quality, go with CoRoN. And then watch your crop show you the results.

Ask your Helena representative how the advanced technology of CoRoN can work to your benefit!

- *Extended controlled release*
- *Excellent efficacy-enhanced plant uptake*
- *Increased plant safety*
- *Minimal volatilization, no crystallization*
- *Exceptional translocation within plant*
- *Good carrier for many crop protection products*
- *Highly efficient utilization of nitrogen*
- *Low wash-off potential*
