

Frontier debuts line of efficient harrows

FRONTIER Equipment has added the new 15 series disk harrow to its line of tillage tools. Available in 8- to 12-foot cutting widths, the medium-duty DH1508, DH1509, DH1510 and DH1512 are suited for 35- to 80-horsepower tractors, says Michael Horrell, Frontier's sales manager.

Features on the 15 series include no-tool adjustable gang angles, overall disk

weight from 81 to 97 pounds per blade and bearings that can be ordered as lubricated gang bearings or self-aligning sealed bearings.

Horrell says the new line is "economically priced" and carries a one-year warranty.

TRUE GREEN: Frontier says its 15 series is aimed at small-acreage operators, but the machines are designed for years of economical service.

Stands above all others

20 years of Seed-Metering Leadership

For more than 20 years, the name "MaxEmerge" has been synonymous with precision planting. Year after year, crop after crop and acre after acre, growers all over North America have relied on MaxEmerge™ accuracy to help them get the most out of their seed investment.

From the cotton fields of the Delta...to the miles and miles of corn and soybeans across the Midwest...and from peanuts to sunflower, sorghum, sweet corn and sugar beets, the revolutionary John Deere VacuMeter™ system has repeatedly demonstrated its superior seed metering precision.

At the heart of the John Deere VacuMeter seed meter is a low-volume vacuum of air that gently holds the individually selected seed to cells on the wide, smooth face of the seed disk. As the

disk rotates and the vacuum is cutoff, the seeds are individually released into the seed tube. The result is precise, consistent population control and beautiful, uniform stands.

From the first MaxEmerge 2 planter back in 1985 to the MaxEmergePlus and today's MaxEmerge XP row units, the John Deere VacuMeter seed meter has proven itself year after year, crop after crop...and stand after stand.

Stop by your dealer today to learn about the full-line of John Deere planters with our revolutionary VacuMeter seed meter. See how 20 years of seed-metering leadership can provide your operation with stands above all others.
