

## Put nitrogen to work without letting it escape.

On average, more than 30% of the nitrogen you apply to the soil escapes, literally disappearing into thin air. And that doesn't even account for the losses when it's tied up in the soil or washed away.

But not with help from SUPER U™. Unlike products requiring incorporation, SUPER U makes urea more readily available through triple-action protection against loss to volatilization, denitrification and leaching. So the nitrogen you buy goes to work fast and stays put, producing healthier crops and bigger yields. Ask your dealer about it today.
