

The **TOTAL PACKAGE**

“Oftentimes, we’re running 15 mph full to keep up with our 12 row combine. The KINZE 1050 works great. It unloads fast. It’s built solid. It’s easy to service. The scales are always right on. I particularly like the simplicity, toughness and reliability of this wagon, and especially the quality of the track system. We’re on our third year with this one and we’ve never adjusted or even tightened the tracks.” **Bill Talsma – Colfax, Iowa**

“I like the way it’s built. There just seems to be a lot more iron in this wagon. The auger flighting is obviously thicker. The frame is really heavy-built. It has a low profile design which makes it easy to see what’s happening with the load. And, we have those big floater tires on it, so our footprint may even be lighter than before, when we operated with smaller size wagons.” **Bill Bruere – Prole, Iowa**

- “On-Demand” drive system
- Balanced, low-profile designs
- Up to 1050 bushel capacities
- Optional roll tarps and hydraulic tip spouts for 850 and 1050
- Heavy-duty reinforced hubs
- One-piece horizontal augers
- Industrial grade hydraulics
