

When weeds absorb herbicide faster, they die faster.

With the patented technology of Alliance™ or Class Act® Next Generation, your glyphosate herbicide starts working in just three to five days. Our adjuvants coat the plant and drive herbicide inside—killing weeds twice as fast, even during hot, dry weather. And most important, these corn-based liquid premixes are safe for your crops. So strengthen your tank mix, and ask your dealer which of these proven adjuvants is right for you.

Reliable field-tested adjuvants
