

**Residual control in a glyphosate corn herbicide.
Very unexpected.**

New Halex™ GT gives you everything your current glyphosate does, plus residual weed control. It's the only herbicide specifically designed to improve your glyphosate corn program, whether you grow Agrisure® GT or Roundup Ready® corn. Halex GT stays in the soil to take care of continuously emerging weeds. Its residual control lasts far into the season for better yield potential and a more convenient, more productive glyphosate program. Try Halex GT on your farm and see for yourself.

Call 1-866-SYNGENT(A) (796-4368) or talk to your dealer.
