

Illinois Soybean Association seeks at-large directors

THE Illinois Soybean Association is seeking soybean producers interested in serving on the ISA board as an at-large director. The board is comprised of 18 district directors representing specific counties throughout the state and six at-large directors that represent the state as a whole. The nomination process starts this spring for the two open at-large positions.

"Each director brings a unique perspective to our board, and the at-large directors play an equal role in the decision-making process," explains David Hartke, a soybean grower from Teutopolis and current ISA chairman. "Our directors take their positions very seriously and try to do what is best for soybean farmers in Illinois."

Any interested producer must notify

the board through the ISA office by submitting a letter of interest by certified mail with a return receipt request. Letters must be postmarked no later than March 15. Application forms will be distributed to all interested individuals. Completed applications must be returned to the ISA office and postmarked no later than March 20.

The board will meet March 25 and

nominate no more than six candidates for election from the pool of interested parties. The election of at-large directors will take place during the July 31 annual meeting in Utica.

Improve your bottom line with precision planting

Tired of being hit with extra seed costs at the start of the season and then again at harvest with lower yields from cross planting and skips? Raven's new AccuRow automatic section control for planters can help by eliminating costly overlaps and skips, while avoiding no-plant areas and ensuring optimum accuracy for maximum yields.

AccuRow's GPS-guided on-off section control delivers precision planting where you need it most—at end rows, point rows and everywhere in between. With AccuRow, it's automatic. And that makes life easier with faster, more accurate planting and by eliminating problems associated with cross planting.

In-cab view of Raven's new AccuRow automatic planter section control function with Envizio Pro multi-function field computer.

AccuRow works seamlessly with Raven's multi-function field computers, giving you the ideal computer and display interface for simple and effective section control for your planter. Easy to install and operate, AccuRow is compatible with planters of most every size and shape. Up to sixteen-row capability also lets you take full advantage of your particular guidance system for maximum savings and performance.
