

TECHNOLOGY THAT **FUELS**[™]

Soybean and canola crops — sources of oil to produce biodiesel fuel — are beginning to turn the wheels of the economy. The Pioneer IndustrySelect[®] program is working closely with the biodiesel industry to identify and develop soybean and canola products that produce higher oil output for fuel processing.

Researchers at Pioneer are focusing on a new generation of high-yielding soybean and canola products to maximize oil produced from every acre you grow. Pioneer is leading, with ... *Technology That Fuels*.[™]
