Dairyland releases ultralow-linolenic-acid bean

Dairyland Seed Co. recently announced the release of a new Roundup Ready, ultralow-linolenic-acid soybean. The variety, DSR-20/RR-UL, combines ultralow-linolenic and Roundup Ready traits. A limited supply of the soybeans will be available this spring, with initial production contracts for the DSR-20/RR-UL soybeans through Zeeland Farm Services Inc. in Zeeland, Mich.

For more information, contact Dairyland Seed, West Bend, Wis., at 800-236-0163 or visit www.dairylandseed.com.

Many new Jung products

More than half of the seed products in Jung Seed Genetics catalog for 2009 planting are new this year. Most corn products can be planted with VT3 technology. Much of Jung seed is certified for the challenges of high-residue conservation-tillage growing environments. For more information, contact Jung Seed,

Randolph, Wis., at 800-242-1855 or visit www.jungseedgenetics.com.

New trait-filled seed from Curry

Curry Seed, Elk Point, S.D., has 13 new Roundup Ready Corn 2 hybrids in its 2009 lineup. The new Herculex XTRA products provide growers with protection against European corn borer, southwestern corn borer, black cutworm, fall armyworm and western bean cutworm, as well as protection from larval injury caused by corn rootworm.

Curry Seed also has 14 new Roundup Ready soybean varieties. They were developed using Pioneer's Accelerated Yield Technology and proprietary Marker-Assisted Selection patented processes. The processes helped develop varieties with phytophthora-resistant genes Rps1A, Rps1C, Rps1K, Rps3 and Rps6 and soybean cyst nematode-resistant genes PI88788 and Peking.

New remote spray control saves time, energy and chemicals.

Ever wish you could cut your work time in half? Like when you're checking spray tips and nozzles. Raven's latest innovation, an integrated remote spray control device, makes it possible — and it works with all new AccuBoom section control systems for greater savings and performance.

Unlike other remotes, the handy AccuBoom remote control system and control node are integrated for easier installation and a superior, less expensive solution. With the new AccuBoom remote, you can turn each boom section on and off from outside the cab while you're right there watching — safely. No more jumping in and out of the cab while your sprayer is spraying costly chemicals, or having to rely on a second person on the ground or in the cab to do the job.

"I really like it," said Gary Cook of Paul, Idaho, after spraying 3,000 acres with the new AccuBoom remote section control installed. "Flushing and cleaning out the booms was a snap. And in the end, it saved me time, chemicals and energy."

For optimum chemical coverage and performance, there is no substitute for the timely checking and maintenance of spray tips and nozzles. With AccuBoom's convenient hand-held remote, you won't be tempted to put it off. The headaches and hassles are gone — and pre-spray inspections and winterizing can't get any easier.
