# Branson adds 2 tractors to high-horsepower line

**B**RANSON Tractor Co. has two new four-wheel-drive models in cab or Rollover Protective System variations to challenge the growing number of competitors in the upper-horsepower range of compact tractors. Both models of the 30 Series are powered with four-cylinder diesel engines, the 5530 developing 55 horsepower with a turbocharger, and the 6530 rated at 65 hp.

The 6530 power plant carries the Cummins name and is fed by direct injection and is naturally aspirated. PTO ratings are 47 hp for the 5530 and 57 hp for the 6530. Both models come with 24-gallon fuel tanks, and both models burn about one-half gallon of fuel per hour.

The 30 Series shifts with a synchromesh 24-by-24 (including a manual creeper gear) transmission equipped with synchro shuttle, and both models have a three-point hitch. The 5530 is a Category I and the 6530 is a Category II.

Creature comforts include

**30 SERIES:** Branson Tractor Co.'s new 30 Series features two models in cab or ROPS variation with either a 55-horsepower turbo-diesel or a 65-hp Cummins naturally aspirated diesel. Both have 12-by-12 transmissions with a manual creeper gear.

a tilting steering wheel connected to power steering, a convenient instrument cluster and centralized control levers for better handling.

Cab models feature a fully enclosed design with air conditioning.

Four rear hydraulic ports allow quick implement connection, and a single switch in the

cab moves the implement to its highest position.

The new models both have an angled caster design on the front wheels to reduce the turning radius.

For more information on the 30 Series Branson Tractors, call 877-734-2022, or go online to [www.bransontractor.com](http://www.bransontractor.com).

## Bobcat offers joystick controls on 2 loader models

**B**OB-CAT has announced its S130 and T140 loaders now have the option for selectable joystick controls for drive and hydraulic commands on smaller machinery.

The option allows operators to choose between "ISO" or conventional skid-steer "H" control patterns.

The SJC on the Bobcat machines is electrically switchable from the cab. In the ISO position, the left stick operates the drive functions, and the right controls the left and tilt. In the H position, the left joystick controls the left wheels and left arm functions, while the right controls the right wheels and the attachment tilt.

The option also features horsepower management to maximize pushing and digging power, and hand speed controls with an accelerator foot pedal.

For more information, visit [www.bobcat.com](http://www.bobcat.com).

## Keep your tools in roller cabinet

**M**ONTEZUMA Manufacturing has completed its line of roller cabinet toolboxes with models up to 72 inches wide.

The largest model features 18 locking extension drawers and floor-gliding spring-loaded casters with ratings up to 900 pounds. The drawers are rated at 250-pound capacity each. Also, the top of the cabinet is a stainless steel work area.

The exterior has a tough powder coating, and drawer pulls and corner trim come in brushed aluminum. For more information, call 620-846-2482.

## 2 New Agronomic Choices

### 8200 Model Class II All-Purpose

- Primary tillage or seed bed
- Heavy residue management
- Average 195 lbs/blade
- 22" or 24" blades

### 8300 Model Class III Primary Tillage

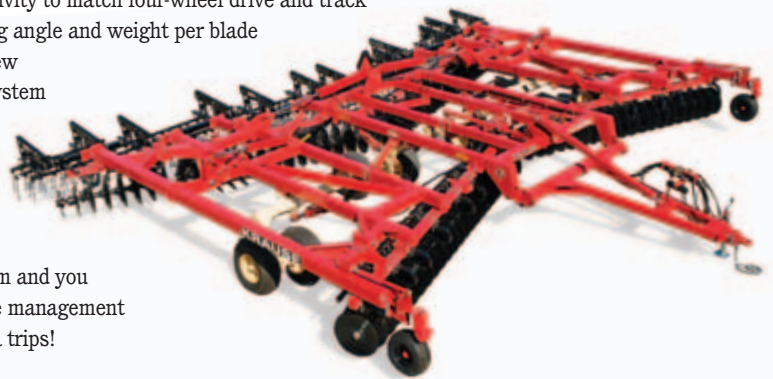

- Primary tillage/deep discing
- Extreme residue management
- Average 223 lbs/blade
- 24" or 26" blades

# We Raised the Bar for Productivity And Lowered it for Transport Height

In sizes from 28 ft. to 38 ft., the new 8000 series tandem disc harrows offer maximum productivity to match four-wheel drive and track tractors. Increased gang angle and weight per blade combined with an all-new Hi-Clearance scraper system mean unmatched performance in high-yielding Bt corn residue. Add Krause's exclusive 24/7° parallel link tine harrows system and you have a one-pass residue management system that saves extra trips!

## Lowest Transport Height in Its Class

New Quad-Fold™ models (36 ft. – 38 ft.) let you take full advantage of high horsepower tractors, yet transport height is only 13 ft. 5 in. You'll realize up to 24% increased productivity and save fuel with each pass versus models of comparable transport height.
