

This changes ever**Y**thing

The new Y Series soybeans from Pioneer are loaded with yield and helping growers climb to a whole new level of performance.*

Our patented Accelerated Yield Technology (AYT™) system is helping Pioneer research double the rate of genetic yield gain compared to varieties developed without these innovative marker technologies. And Y Series varieties continue to deliver many key defensive traits, including Peking source SCN resistance and sudden death syndrome tolerance. Reasons that have made Pioneer® brand soybeans the single most planted brand across the country.

Talk to your Pioneer sales professional about the Pioneer varieties best suited to make the most from your 2009 acres. Visit us at www.pioneer.com/soybeans.

*The 32 new Y Series Pioneer® brand varieties outyielded competitor varieties on average by 5%, with several Pioneer varieties 6-10% higher yielding, in more than 1,800 side-by-side comparisons last fall.
