## THE POTENTIAL OF YOUR HYBRIDS. THE PROTECTION OF OUR TRAITS.

Agrisure™ offers a full line of high-performance corn traits. Including elite rootworm and corn borer traits for maximum protection of roots, stalks and ears. And proven glyphosate and LIBERTY® herbicide-tolerant traits for complete weed management flexibility. Plus, Syngenta's gentle trait insertion process adds the traits you need without damaging the existing genetic makeup of your selected hybrids. You can count on Agrisure corn traits to help you maximize yields by protecting the full yield potential of your hybrids. So ask your seed dealer about Agrisure corn traits and the new Agrisure 3000GT quad stack. And make sure your hybrids reach their full potential.
