

"I used to do side-by-side plot trials. DEKALB® beat its leading competitor year after year."

Ivan Guyer, a third-generation Illinois grain farmer, has increased his percentage of DEKALB® corn since he began planting it 20 years ago. "DEKALB YieldGard VT Triple® is about all I planted this year," he says. "Around here, we've got to have rootworm protection. DEKALB is more dependable than other brands we've tried."

Guyer also depends on the DEKALB brand's strong roots and strong stalks to give him better standability and drydown. "It's important at harvest time," he says. "I've had good yields ever since I've planted it."

Ivan Guyer
Annapolis, Illinois

Farmers like Ivan Guyer are confident in their decision to plant DEKALB for its superior performance, advanced breeding and trait technology, and proven yield advantage.

Three reasons why more farmers are planting more DEKALB.

Individual results may vary, and performance may vary from location to location and from year to year. This result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.

Always follow grain marketing and insect resistance management requirements, and read and follow pesticide label directions. Roundup Ready® crops contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® agricultural herbicides. Roundup® agricultural herbicides will kill crops that are not glyphosate tolerant. YieldGard® products are not yet registered in all states. Check with your Monsanto representative for the registration status in your state.
